

HMPD QUANTUM ARCHITECTURAL AUDIT

TXN ID: HMPD-RUN-849 | SESSION: UESP-AGENT-1

For a 12x6M modular ablution facility in Kempton Park, I'll provide a suggested layout and flooring options.

****Modular Ablution Facility Layout:****

To accommodate 20 females, I recommend the following layout:

- * 4-6 toilet cubicles (depending on the size and comfort level required)
- * 6-8 washbasins with mirrors and lighting
- * 4-6 shower cubicles (if required)
- * 1-2 disabled toilet facilities (depending on the requirements)

Here's a possible layout:

- * Toilet cubicles: 4 units, each 1.5m x 1.5m (2.25m²)
- * Washbasins: 6 units, each 1.5m x 0.5m (0.75m²)
- * Shower cubicles: 4 units, each 1.5m x 1.5m (2.25m²)
- * Disabled toilet facility: 1 unit, 2m x 2m (4m²)

****Flooring Suggestions:****

For a modular ablution facility, it's essential to choose flooring that is:

1. Water-resistant
2. Slip-resistant
3. Easy to clean
4. Durable

Some suitable flooring options include:

1. ****Vinyl flooring****: A popular choice for ablution facilities, vinyl flooring is water-resistant, easy to clean, and comes in various designs and patterns.
2. ****Ceramic tiles****: Ceramic tiles are a good option, as they are water-resistant, durable, and easy to clean. They also come in a variety of designs and colors.
3. ****Porcelain tiles****: Porcelain tiles are similar to ceramic tiles but are more durable and resistant to water.
4. ****Epoxy flooring****: Epoxy flooring is a durable, water-resistant option that is easy to clean and maintain.
5. ****Rubber flooring****: Rubber flooring is a slip-resistant option that is also water-resistant and easy to clean.

****Additional Considerations:****

- * Ensure the flooring is installed with a suitable slope to allow for proper water drainage.
- * Use a non-slip coating or matting in areas around the showers and washbasins to prevent slipping.
- * Consider using a flooring material with antimicrobial properties to reduce the growth of bacteria and other microorganisms.

****Local Regulations and Compliance:****

Please note that the design and layout of the modular ablution facility must comply with local regulations and building codes in Kempton Park. It's essential to consult with local authorities and experts to ensure that the facility meets all the

necessary requirements.

I hope this helps you in planning your modular ablution facility. If you have any further questions or need more specific guidance, please don't hesitate to ask.
